Travel Dashboard

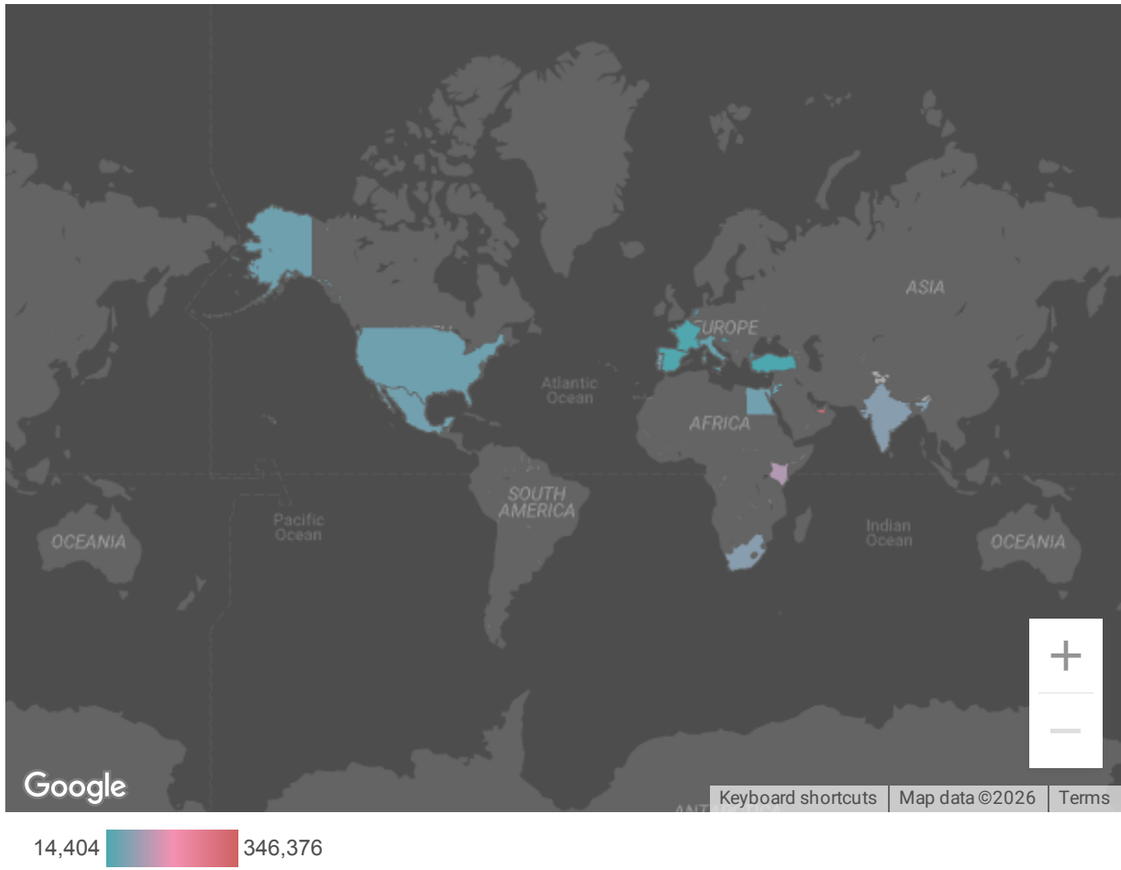
As a big fan of both travel and data, I decided to challenge myself to create this dashboard in order to track how many countries I have travelled to as well as track how many steps I do in each country and work out some averages per trip such as average distance, average mileage, and where I was most active. This dashboard includes data from November 2021 (post-COVID-19) onwards, with health data coming from either my phone or Apple Watch.

This dashboard answers key questions such as
- How much have I travelled?
- How many trips per year do I do on average?
- How many trips do I do per purpose?
- What are the total steps I do per country?
- How many countries do I repeatedly go to and how often?
- How many countries per continent have I visited?

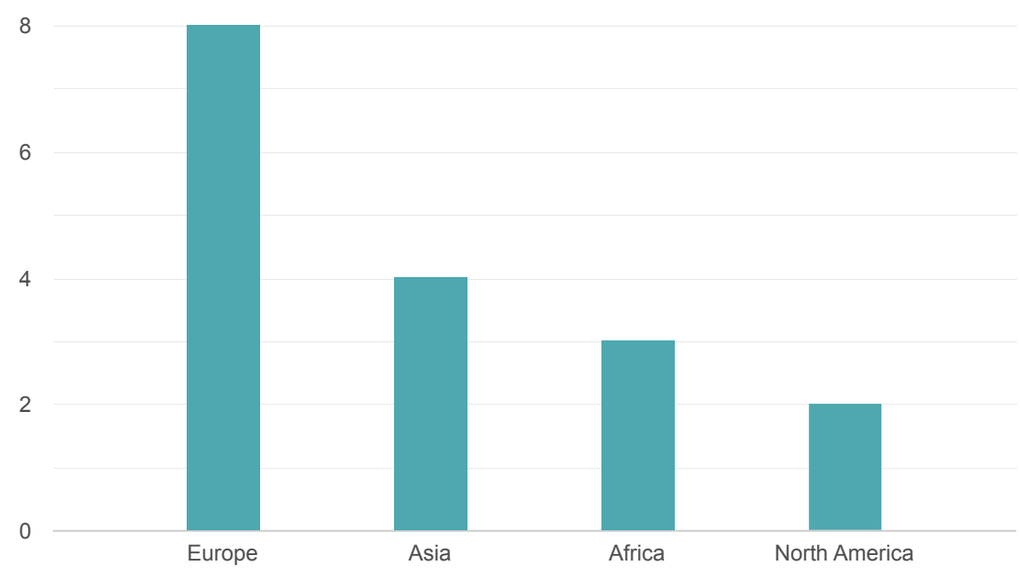
There are additional questions that have been answered throughout this dashboard and it has been very fascinating to find out more with a limited, basic dataset.

Trips since 2021 28	Avg Steps per day 6140	Years of Data 4.8
Distinct Countries 17	Avg Miles per Day 2.42	Trips per year 6
City 19	Total Days Abroad 206	Steps 1.3m
Total Distance in Miles 498.9	Days since last trip -152	Countdown until next holiday 86

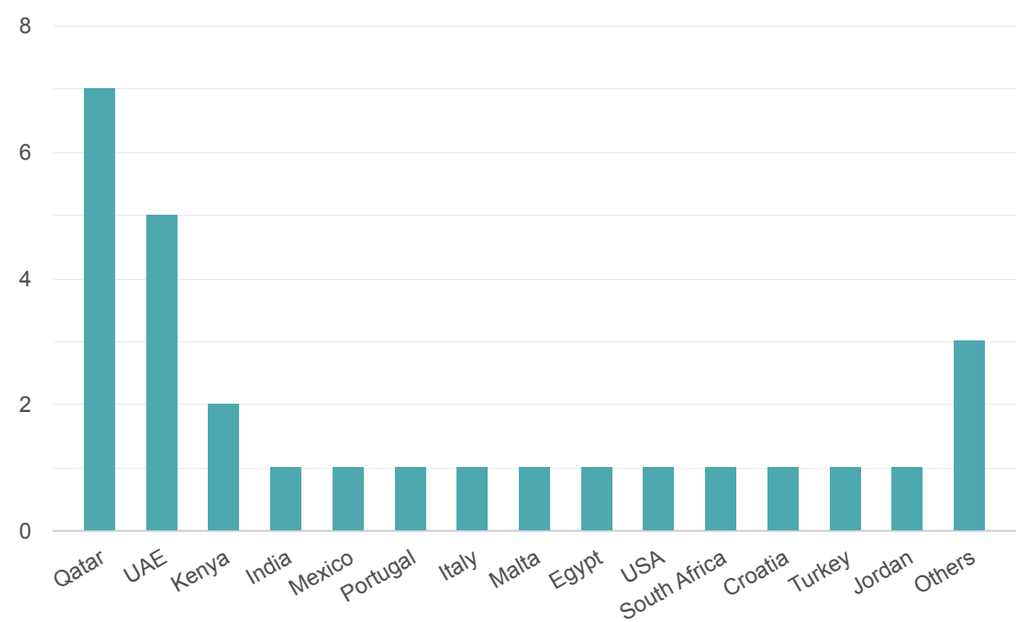
Total Steps per Country



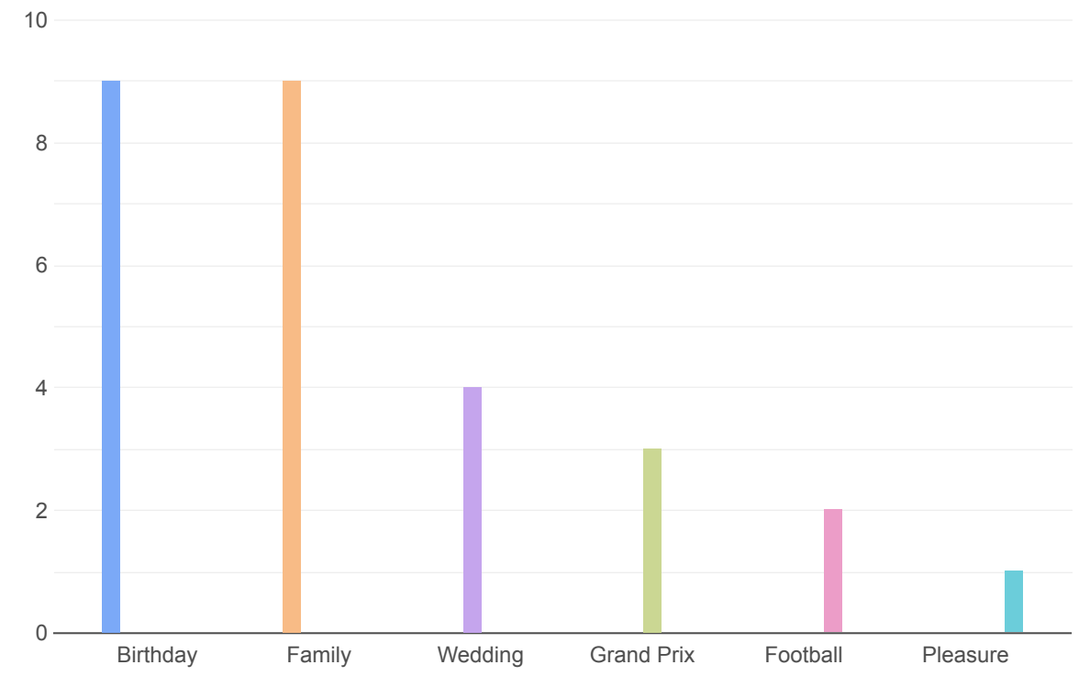
Country by Continent



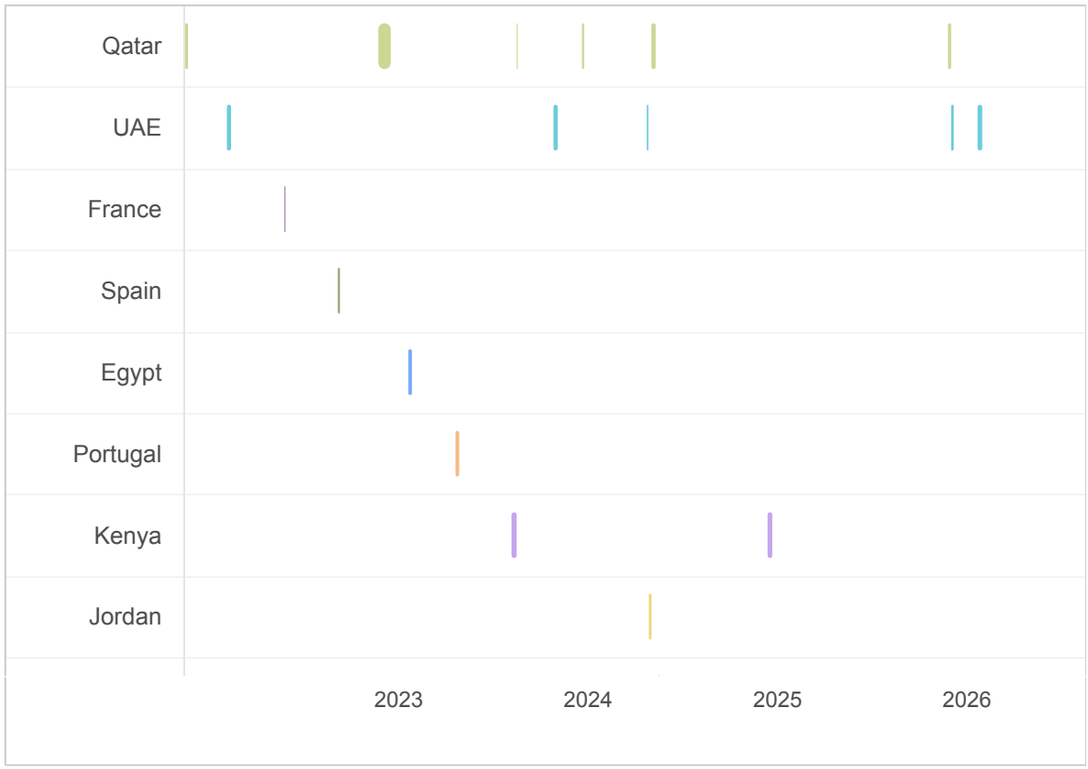
Repeated Destinations



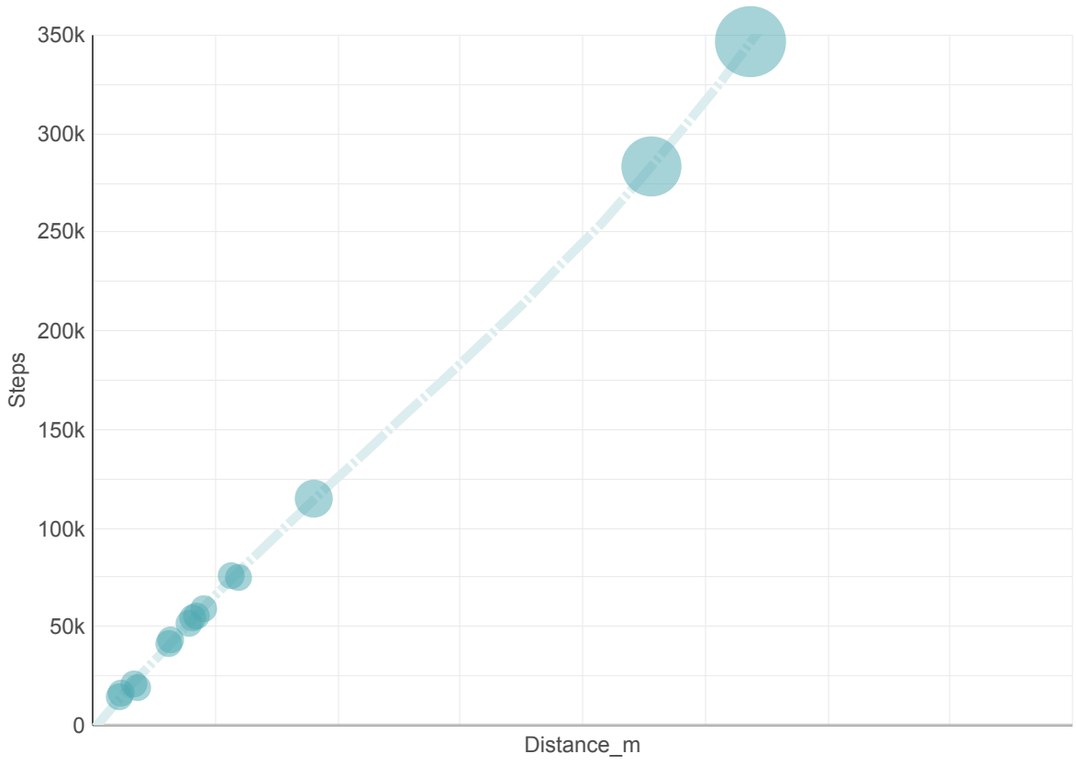
Trips by Purpose

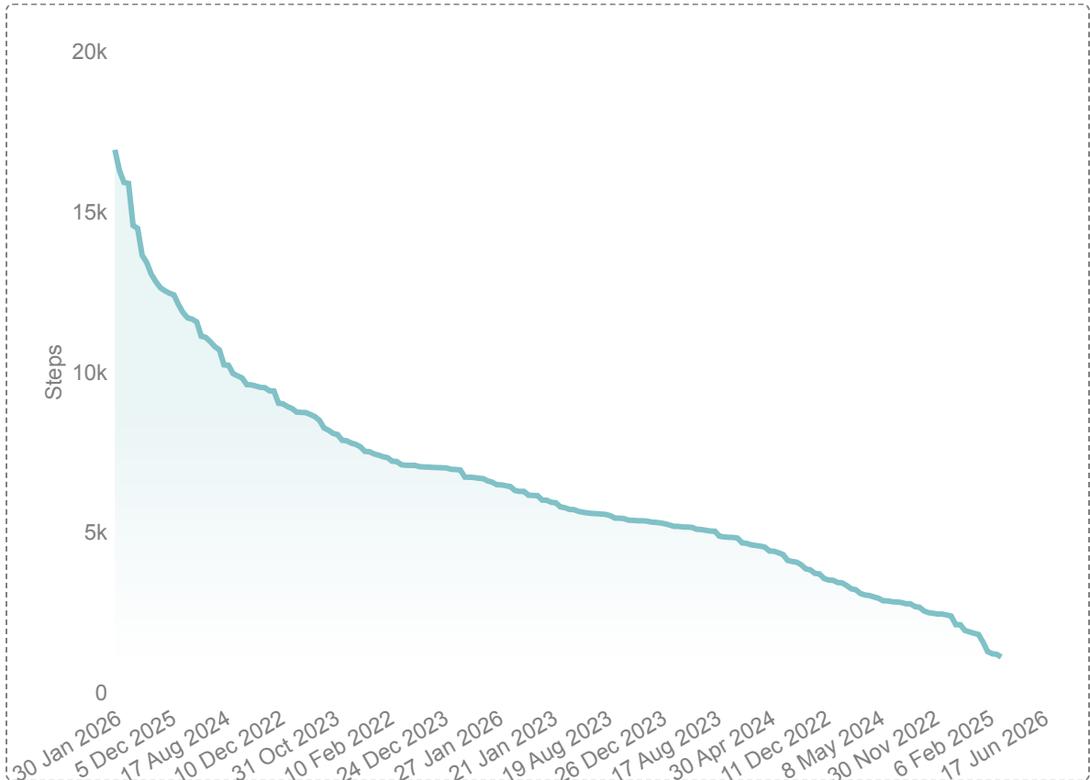


Timeline



Steps compared to Distance, by amount of trips





Steps by Date
